

# Three-Layer Sample Skew of the Formative Survey

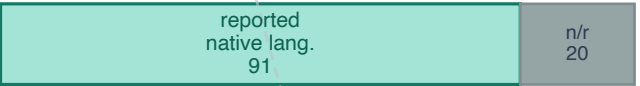

Qualtrics N=117 raw > N=111 eligible > branching skew tracks > F5 anchor on N=19 Driver/Both

TRACK 1  
Eligibility

## TRACK 2 — Language skew

Stage A  
(N=111)

Stage B  
(N=91)

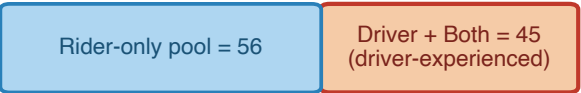

## TRACK 3 — Role skew

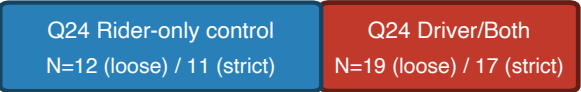

Stage A  
(N=111)

Stage B  
(pooled)

Stage C  
Q24 subset

## TRACK 4 — Completion skew

Stage A  
(N=111)

### Implication

Per-question N varies.  
F1–F4 use loose dropna.  
F5 strictly subsets to Q24-completers.

### F5 anchor (rating-fairness asymmetry)

- F5 sample = N=19 Driver/Both (loose per-item dropna); Rider-only control N=12.
- Modal CHI sample size = 12 (Caine 2016); N=19 falls within the formative-design distribution.
- Full-sample N=30 mixed reporting is methodologically inappropriate (cf. §4.2).

Legend:

- Mandarin (teal)
- English (orange)
- Other / not reported (grey)
- Rider-only (blue)
- Driver / Both (driver-experienced) (red)
- Completed (green)
- Partially completed (light green)
