

Points Award / Deduct Architecture (services/points.service.js:122-236)

⚠ **Production deployment status: NOT yet provisioned**

- **point_rules** rows: 0
- **point_transactions** table: **DOES NOT EXIST** (REST returns PGRST205)
- 184 user rows, all **users.points = 0**
 - Design is implementation-ready but behaviorally inert

Design rationale. Base-point payouts are capped well below per-seat cash price (~\$22-38) so points **complement**, not **substitute**, the cash motivation lever (cf. F4: gamification 48.3 vs financial 63.6 in \$4 motivation finding).
